Modern development methods

Hackathons

WHAT IT IS

A hackathon is one day to one week in which you work differently than usual and focus on one thing, without distractions. It serves to test a new way of working (cross-functional teams, Sprints, flow, mob programming), to fix something long overdue such as technical debt, to build a prototype, or to work with a department you normally do not work with. Leadership hackathons take up to two days and suit the moment after a diagnosis and before a transformation. Each one is designed from scratch; priced individually.

AT A GLANCE

Audience	organizations that want to test or fix one thing quickly
Led by	Kate Hobler

WHO IS IT FOR?

- You want to check whether a new way of working suits you before committing to it.
- There is a problem nobody has time to sit down with.
- Departments do not know each other and do not work together.

WHAT YOU GET

The client receives:

- an answer to the question asked: a prototype, a fixed problem or a tested way of working,
- topics that would never surface in everyday work,
- people from different departments who have worked together,
- a decision on what to do with the results.

PRICING

Priced after an initial conversation; the price depends on the number of people covered.

Prices are net, in PLN; VAT is not included. Offers in EUR or USD on request (plus 15% for exchange-rate risk and bank spread). Invoices are payable within 14 days.
